4) Login

RollNo:-43
Name: Patel Krishna Kantilal
Msc ICT-3

2) Read data from students.xml file and store them in students table of MySQL.

Practical 2: XML to MySQL

Processed 3 student record(s). New records were inserted; matching roll numbers were updated.

Go to Practical 3: Export MySQL to XML

3) Read data from students table of MySQL and store them in students.xml file.

```
▼<students>
  ▼<student>
     <roll_no>1</roll_no>
     <name>Aarav Patel</name>
     <email>aarav@example.com</email>
     <course>BCA</course>
   </student>
  ▼<student>
     <roll_no>2</roll_no>
     <name>Diya Shah</name>
     <email>diya@example.com</email>
     <course>BSc IT</course>
   </student>
  ▼<student>
     <roll_no>3</roll_no>
     <name>Rohan Mehta</name>
     <email>rohan@example.com</email>
     <course>BCA</course>
   </student>
 </students>
```

4) List files in a directory

RollNo:-43
Name: Patel Krishna Kantilal
Msc ICT-3

Practical 4: List Files in a Directory

Directory: `practicals/sample_files`

- readme.txt

5) Call express rest api in php.

Practical 5: Call Express REST API in PHP

Request URL: `http://localhost:3000/api/message`

Response from Express API:

```
{
    "success": true,
    "message": "Hello from Express REST API!",
    "source": "Node.js + Express",
    "port": 3000
}
```

6) Call php rest api in express.

```
{
  "success": true,
  "message": "Express successfully called the PHP REST API.",
  "phpApiUrl": "http://localhost/php_shopping_cart/practicals/api/students.php",
  "data": {
    "success": true,
    "count": 3,
    "students": [
      {
        "roll_no": "1",
        "name": "Aarav Patel",
        "email": "aarav@example.com",
        "course": "BCA"
      },
      {
        "roll_no": "2",
        "name": "Diya Shah",
        "email": "diya@example.com",
        "course": "BSc IT"
      },
      {
        "roll_no": "3",
        "name": "Rohan Mehta",
        "email": "rohan@example.com",
        "course": "BCA"
      }
    ]
  }
}
```
